

Specialised liquid to reactivate polymer surfaces greater than 7 days old

Product Description

TAL RC2 is a reactive liquid used to reactivate polymer surfaces so that subsequent coatings can be applied on top of existing ones.

Uses

- Recoating when over-coating times have been missed
- Reactivating polymer surfaces to receive new coating or flooring products.

Packaging

5 and 25 liter drums.

Shelf Life

24 months when stored at below 35°C under shade in a dry environment.

Application

For use on previously coated polymer surfaces. Used when recoating after the re-coat window has elapsed. TAL RC2 is utilized for this purpose with relatively new applications (within 4 weeks of the initial application). When re-coating older Polymer applications contact TAL for other options.

Apply the TAL RC2 until the surface is wet, use cloths to rub the TAL RC2 into the surface then allow to dry. Once evaporated, clean any residue and apply additional coating to the desired thickness.

Limitations

Avoid excessive application.

Avoid skin contact.

Do not discard into the water system.
